Problem Solving

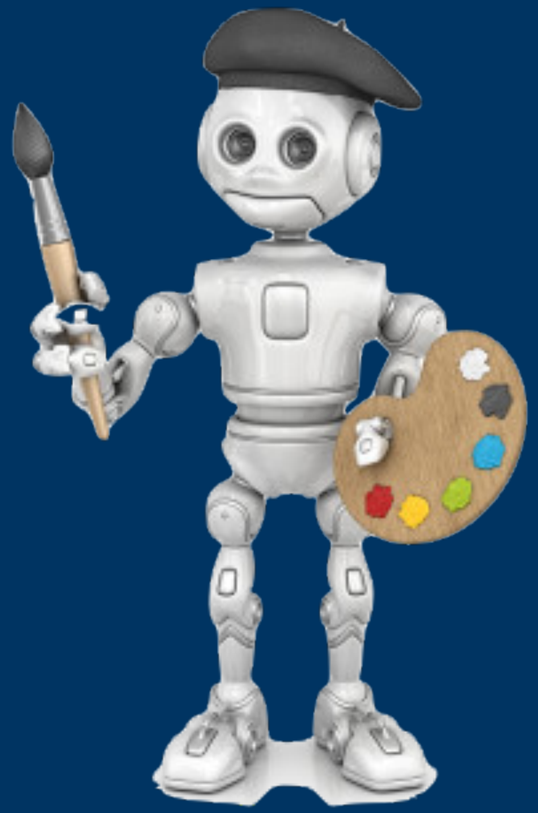
Let's Think and Learn through Working Together!

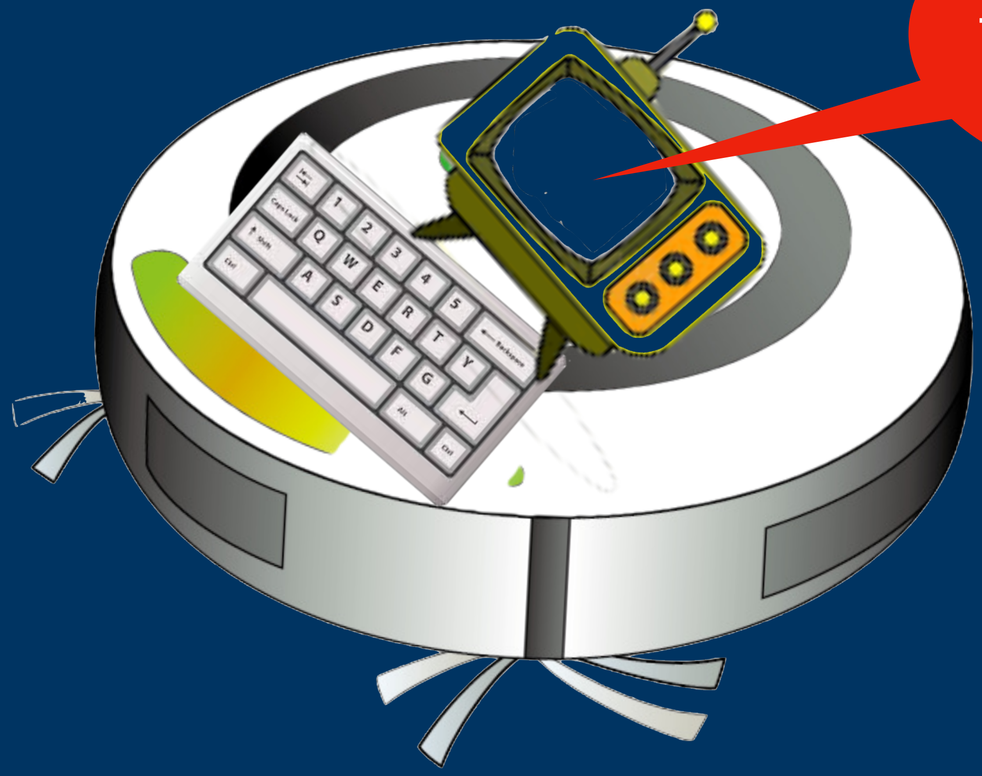
CSE

Learning how to accomplish output is the focus of the lesson.

We are thinking about the following:

- Why might it be important to learn how to display text on Pink Painter's "screen".
- What instruction might I use to accomplish this?





The "console" on replit!

Think about this question and talk with your tablemates about it.

“Why might it be useful to display text on Pink Painter's screen?”

Be prepared to share with the entire class.

Q: How do I tell Pink Painter to show stuff on her screen?

A: A new instruction: print

On her screen, show the text contained in the quotation marks.

e.g.

```
print ("working...")
```

e.g.

```
print ("working")
print  ("hard")
print ("at painting")
```

On her screen, show three different lines of text.
