

How do I Teach a Computer to Show Something?

Output in Python

unit 2

Lesson 1: *Output in Python*

unit 2

Def: **Output** is the text that a computer displays

unit 2

The Python vocabulary word
word to produce output is:

`print`

unit 2

Notice that every instruction contains a set of parentheses!

Examples:

You can print numbers:	<code>print (25)</code>
You can print words/phrases:	<code>print ('banana man')</code>
You can print more than one thing on a line:	<code>print ('I have', 10, 'books')</code>
You can print the answers to math problems:	<code>print (120 + 53)</code>
