

How do I Teach a Computer to Remember Something?

Variables in Python, Part 2

CSE

unit 2

Fact: Variables can be used in combination with other Python instructions

Examples:

Ask a human to type WORDS

Remember what the human typed.

Ask a human to type NUMBERS

Remember what the human typed.

Ask the computer to do math

Remember the answer that the computer found

<code>input()</code>	<code>answer = input()</code>
<code>int(input())</code>	<code>numbers = int(input())</code>
<code>3 * 20 + 1</code>	<code>total = 3 * 20 + 1</code>
