How do I Teach a Computer to Calculate Something?

Math in Python

Lesson 2: *Math in Python*

Def: An operator is a symbol that represents an action

Here are some "human" operators:

Python "math" operators:

Symbol	Action it tells the computer to do	Example
+	Add	print(2+5)
-	Subtract	print(3-2)
*	Multiply	print(20*5)
/	Divide	print(100/4)

`02:00`
